

### ADN 408 Mains Adapter/ Distribution Module

#### Outline description: ADN 408

The **ADN 408** distribution unit has been specially developed for plant and system engineering, in order to eliminate the need to connect multiple cores to a single screw terminal. The module has the following outputs: 4 x 24V for supply of adjacent modules, and 4 x +/- 15V or +/- 10V.

The +/- 15V and +/- 10V voltages are provided for supply of external sensors. They can be jumper-selected, and can each be loaded to +/- 50 mA.
